+ Needs Assessment

We develop a strategic program based on your organization's goals to maximize savings and efficiency and identify the target sites.

+ Utility Analysis

By comparing your existing rates with current market rates and verifying your rebate eligibility, we find opportunities to enhance your savings potential.

+ On-Site Survey

Through a comprehensive digital survey of existing lamps and fixtures, with light level readings and photographs to create exterior site maps, we identify the types and locations for all exterior fixtures.

+ Project Design

We design your project specifications to meet price, efficiency, aesthetic, rebate and warranty needs. We outline the estimated energy, inventory, maintenance and carbon savings, and develop a detailed payback analysis & ROI calculation.

+ Contract Execution

We develop a scope of work and installation timeline to ensure the project teams can stay on time, on budget, and deliver beyond your expectations.

+ Product Procurement

We handle all material ordering, confirmation, and find alternate specifications for items with long lead times to ensure projects stay on schedule.

+ Logistic Management

To ensure your team is prepared and informed, we provide daily product tracking updates and delivery verifications to ensure that product conditions, counts, and colors are correct.

+ Project Installation

Our professional Project Managers follow detailed project SOPs to deliver on time and on budget, deploying a national workforce of dedicated lighting crews in all 50 states.

+ Status Reporting

To help your team can stay focused on their own responsibilities, we provide daily communications with site managers and offer custom corporate communications timelines to meet your needs.

+ Client Walk Through

Upon completion, we conduct an in-person walk through to review the scope of work and provide digital punch lists with photos.

+ Project Closeout

We manage post-install rebate processing and deliver a Project Book to your site team with helpful instructions on warranties, product information, and maintenance.
